EXPERIENCE

Software Engineer, Mercor — Feb. 2026 - July 2026
Seattle, Washington (Remote, Contract)

- Orchestrated agentic coding workflows with Claude Code to reproduce, diagnose, and fix issues across unfamiliar repositories, reviewing agent-generated patches for correctness, regressions, and test coverage before submission.
- Developed 135+ Python coding problems, reference solutions, and test suites across 25 repositories to train AI coding models, earning a 99%+ quality rating; developed without AI assistance using official documentation.
- Evaluated AI-generated code and documented actionable technical feedback on correctness, architecture, edge cases, and regressions, validating proposed fixes through testing and code review.
- Annotated code and images for reinforcement learning pipelines, applying detailed rubrics to support AI model training and evaluation.

DevOps Engineer Intern II, ResMed — May 2024 - Aug. 2024
San Diego, California (Remote)

- Restored 25+ Windows servers during the global CrowdStrike SEV-1 outage and helped automate recovery for the remaining fleet, reducing downtime.
- Monitored production multi-cloud infrastructure across AWS and Azure, using Azure Monitor and Kusto (KQL) to diagnose incidents and improve service reliability.
- Built a self-service Kubernetes training platform on AKS with a supporting API, Azure DevOps pipelines, RBAC, and documentation, streamlining onboarding and cluster deployments for a 12-person team.

Data Analyst, Texas Tech IMSE — Oct. 2023 - Jan. 2025
Lubbock, Texas

- Built and maintained 15+ Power BI dashboards for IMSE and the College of Engineering, triaging report requests from non-technical staff and sending regular status updates.
- Designed and standardized data pipelines in Python, Pandas, SQL, and DAX, turning ad hoc reporting into repeatable, validated workflows.

DevOps Engineer Intern, ResMed — June 2023 - Sept. 2023
San Diego, California (Remote)

- Automated HIPAA-compliant Skilled Nursing Facility (SNF) server deployments and patching with Ansible and Terraform, making deployments consistent and repeatable as infrastructure as code.
- Built YAML CI/CD pipelines in Azure DevOps to test, version, and deploy Terraform infrastructure as code.

Undergraduate Research Assistant, Texas Tech Applied Vision Laboratory — Aug. 2022 - Jan. 2023
Lubbock, Texas

- Built Python data pipelines to collect, segment, and preprocess 100+ hours of video for evaluating real-time computer vision models.
- Contributed to development and evaluation of Mask R-CNN models in PyTorch, analyzing model performance on real-world video data.

EDUCATION

Texas Tech University, Lubbock, Texas — May 2025
Whitacre College of Engineering
B.S. Computer Science; B.S. Mathematics (Double Degree, Data Science concentration)
Certifications: *AWS Cloud Practitioner CLF-C01, Azure Fundamentals AZ-900*

SKILLS

Programming: Python, TypeScript, JavaScript, Rust, C++, SQL, Bash, PowerShell, YAML
AI/ML: Claude Code, Agentic Workflows, AI Coding Agents, LLM Evaluation, Reinforcement Learning, PyTorch
Testing & Software Engineering: Automated & Regression Testing, Debugging, Code Review, OOP, Git/GitHub PRs
Cloud & Infrastructure: Azure (App Service, Container Apps, Container Instances, VMs, AKS, Azure AI Services), Azure DevOps, AWS, GCP, Docker, Kubernetes, Terraform, Ansible, CI/CD, Azure Monitor, Prometheus, Grafana
Full Stack & Data: React, Next.js, Node.js, FastAPI, Django, REST APIs, MongoDB, Pandas, ETL, Data Pipelines
Languages: English (Native), Portuguese (Fluent), Spanish (Professional), French (Professional), German (Professional)
